## VANISHING HISTORIES: GREENLAND, CLIMATE CHANGE AND THE THREAT TO ARCHAEOLOGICAL HERITAGE

### Visiting Lecture and Discussion

Please join us as we welcome **Dr. Hans Harmsen** of the Greenland National Museum & Archives, for an information presentation on climate change in Greenland and how it poses a threat to archeological heritage.

Greenland, like many other places in the Arctic, is experiencing rapid environmental changes due to a shifting climate. Greenland, like many other places in the Arctic, is experiencing rapid environmental changes due to a shifting climate. These changes are having profound consequences for the survival of Greenland's archaeology. For example, increasing soil temperatures, perennial thawing, coastal and wind erosion, aggressive plant species and human impacts are increasingly causing damage to archaeological sites once known to have excellent preservation. It is not a question anymore of if it will disappear but *when*.

**Tommaney Library  
Haskell Indian  
Nations University**

**12:00PM-1:00PM**

**Food and beverages  
will be provided!**

**Open to students,  
faculty, and staff**

**SPENCER  
MUSEUM of ART**

**Haskell**
