# Piketty's *Capital*

“And the poorer half of the population are as poor today as they were in the past, with barely 5 percent of total wealth in 2010, just as in 1910. Basically, all the middle class managed to get its hands on was a few crumbs.”

Ford Model T first sold in 1909.  
Ford sold 12,000 in 1910.  
459,000 total autos in US, 1910.

17,000,000 annual vehicle sales  
in the US is now the norm.

# WORLD'S FIRST TAKE-HOME AIR CONDITIONER

... new PHILCO 3/4-hp Bantam 12—smallest room air conditioner made!

**Here's the best hot-weather news you've ever heard!**  
 Philco brings you an air conditioner so small you can carry it home—yet it's a giant in cooling capacity. Install the 3/4-hp Philco Bantam 12 in only 15 minutes. You can even do it yourself! Then sit back and forget about heat and humidity.

There's never been anything like the Bantam 12. It does everything bulky, old-fashioned air conditioners can do. Yet all this comfort and compactness costs less than most ordinary 3/4-hp units.

Start being comfortable today! See or telephone your Philco dealer this very minute. Tell him you want a Philco Bantam 12 right away.

**TAKE IT HOME TODAY BE COOL TONIGHT!**

**You can install it yourself!** Only four screws are needed to hold the Philco Bantam 12 in place. Even if you've never done it before. Make your best-laid experiments run on ordinary home voltage (110-115V). (Like few others there's a control!)

**Big capacity cooling—3/4 hp.** The new Philco Bantam 12 has all the luxury features you find on big air conditioners—2-speed fan, Automatic Temperature Control, adjustable grilles.

# My Answer to Piketty's "Crumbs"

1. Make a list of things that did not exist in 1910.
2. Ask people how much they value these things using an online survey.
3. Calculate the Consumer Surplus (CS).

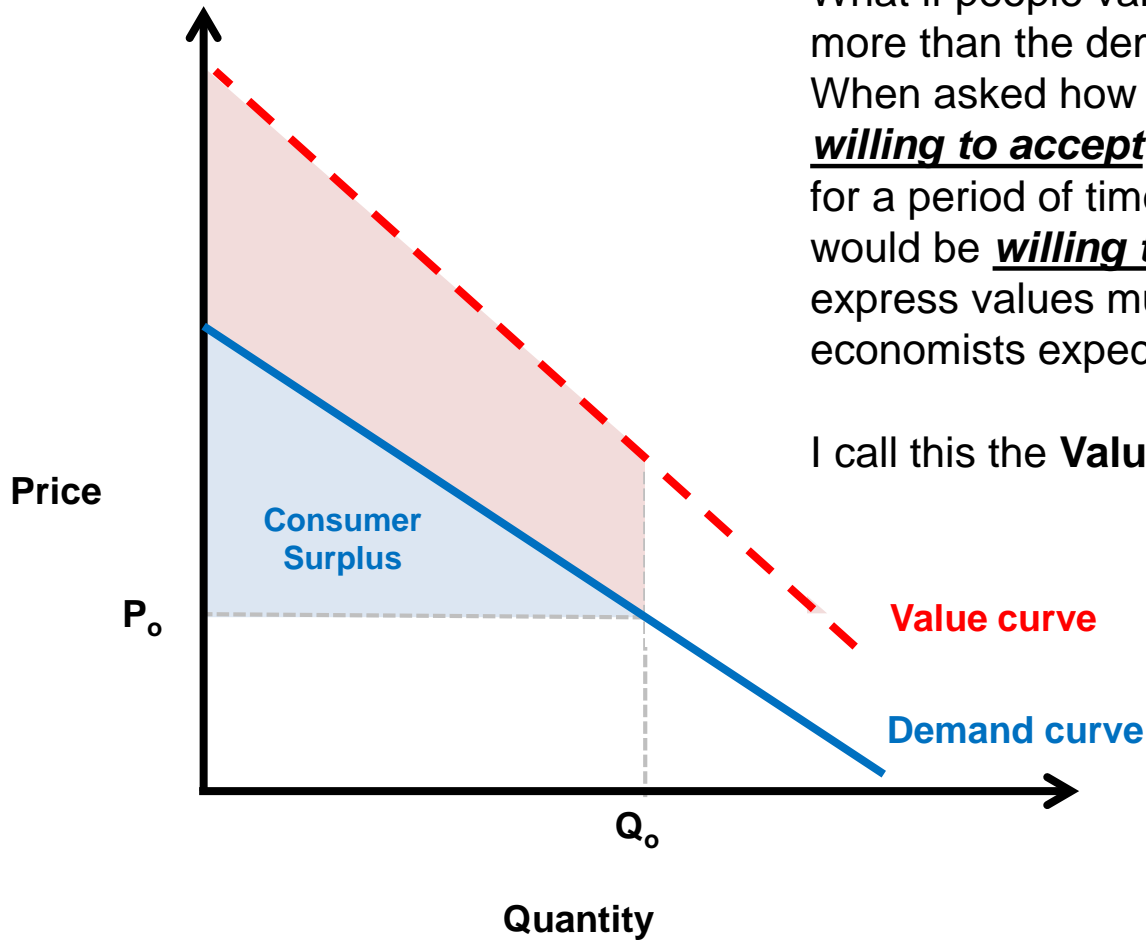

**But first ... we have to read up on what economists call *contingent valuation*. Whoops. Turns out to be rather controversial. Turns out there may be something even bigger than CS.**

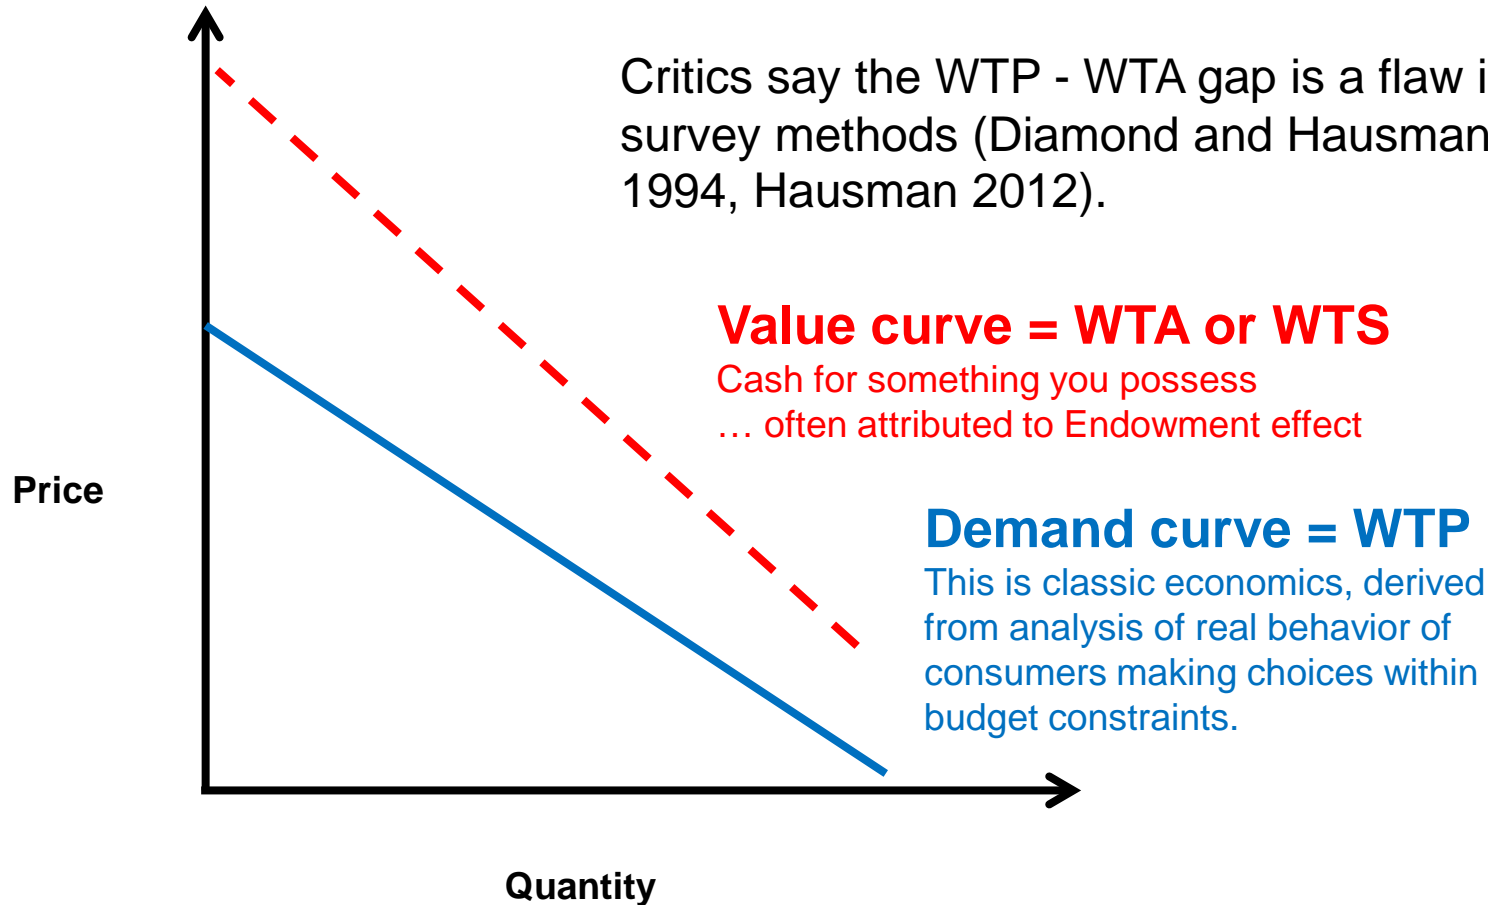

**Consumer surplus** is a measure of the excess value buyers experience when consuming a good, which is more than the price paid. All buyers pay the price,  $P_0$ , but some buyers are willing to pay more, hence the Demand curve.

What if people value products much more than the demand curve reveals? When asked how much would they be **willing to accept** to give up a product for a period of time OR how much they would be **willing to sell** a good, people express values much higher than economists expected.

I call this the **Value curve**.

Behavioralists say it represents loss aversion (Kahneman, Knetsch, Thaler 1990). Others say it is the only way to measure environmental & public goods (Carson and Hanemann 2005).

I think they may be missing something.

# Modern Things

"Imagine you agree to stop using this item for ONE YEAR in exchange for a monthly payment. How much would you be willing to accept in dollars per month to not use the item, starting right now?"

	Median	Average
Indoor Plumbing	\$ 2,000	\$ 30,183

# Inequality?

Thomas Hirschl of Cornell University and Mark Rank of Washington University found that, on average, Americans reside along many different income brackets throughout their lives. Using PSID data, 1968 to 2011:

- 70% of the population will have experienced at least one year within the top 20th percentile of income.
- 53% of the population will have experienced at least one year within the top 10th percentile of income.
- Social Security offers regressive distribution payments
- Worst inequality is unequal opportunity. Worst of all is unequal educations. **1/7 of US adults are functionally illiterate.**
